Title

At the time the patent was in prosecution, all parties involved, i.e., Applicant, Assignee and the attorney involved in the prosecution of the patent application, were concentrating their efforts on the patenting of the presently claimed method of selecting an anti-aggregation molecule having the chaperone-like activity of anti-aggregation that issued in the 5,688,651 patent as claims 1-4, the only claims in the patent.

It was only recently that the Applicant/Patentee and the Assignee realized that the concepts fully disclosed in the specification directed to (1) an agent for preventing or reducing aggregation of an aggregating protein or for disaggregating preaggregated aggregates of the aggregating protein, as defined in claims 12-16, 27-31, 43-47, 56-57, 63-64 and 70-71; a (2) pharmaceutical composition for preventing or reducing aggregation of an aggregating protein or for disaggregating preaggregated aggregates of the aggregating protein, as defined by claims 16-20, 32-36, 48-52, 58-59, 65-66, and 72-73; a (3) method for preventing or reducing aggregation of an aggregating protein or for disaggregating preaggregated aggregates of the aggregating protein, as defined by claims 5-10, 21-26, 37-42, 53-55, 60-62, and 67-69; and the inventions defined in claims 74-87 were not claimed per se, and further they could be and should be now so claimed.

The failure to claim the above defined inventions was because of error and without any deceptive intent. A preliminary amendment presenting the proposed new claims is attached hereto. The applicant has reviewed these claims and believes to be the inventor thereof.
